To Our Valued Customers:

Maryland Materials, Inc. is delighted to announce the upcoming construction of a new, state of the art crushing facility at its location in North East, Maryland. The new crushing operation will replace the current plant and will be operational by late summer 2010. This new “plant of the future” will be fully automated and allow us to significantly increase the production of hot mix asphalt stone (also known as #8 stone) while improving upon the high standards of quality upon which our reputation has been built. As an added benefit, the new plant design will also substantially decrease our “carbon footprint” on the environment that we are all striving to protect.

There will be no interruption of service during the construction phase. Our customers can be assured that they may continue to expect the same level of service and quality that they have always relied upon.

With our best regards,

A handwritten signature in black ink, appearing to read "David R. Thomey". The signature is fluid and cursive, with a large initial "D" and "T".
